

chiiOnline community

chii2020 is **the** international branch meeting for **hyperspectral imaging (HSI) in industry**. Learn about the vast potential lying within the use of HSI and avail of our unique interdisciplinary crosslink between the various hyperspectral interest groups.

This year chii is **online** and offers a mixture of:

- web pitches;
- B2B meetings; and
- live table discussions.

International leading experts and users from all over the world will come together in this perfect setting to discuss latest developments and hot topics in HSI. All this from home without any registration fees and travel expenses!

What to expect:

- ❖ **Welcome Day** on 5th November 2020 with a **keynote** and the launch of **chiiTalks** (B2B meetings)
- ❖ **Eight weekly** online sessions featuring:
 - **10-minute chiiWebpitches**
 - **chiiTables** you sponsor the table and select the topic
 - **chiiTalks**

The Welcome Day sessions and all the chiiWebpitches will be recorded and available until the end of the eight weekly sessions. All you have to do to secure your free access is to register!

HSI can be used to obtain spectral and spatial information about an object via the ultraviolet, visible and near-infrared spectral range (300 nm-2.600 nm). Applications include identifying pressure points in fruit, which will lead to quicker spoiling of the product or establishing the cocoa content of chocolate, the moisture level in wood or the chemical composition of two tablets, which look identical. The technology can be employed in a variety of sectors and contributes hugely to quality assurance.
